准备工作

装MacOS的虚拟机的原材料: VMware虚拟机,Mac OS镜像文件,VM补丁文件(unlocker208,darwin.iso增强工具)

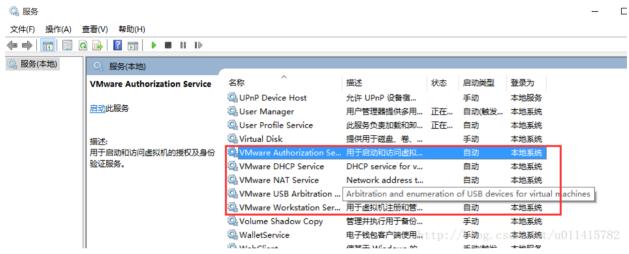

链接: https://pan.baidu.com/s/12kIHlFAUXhjruChaixuabQ 提取码: 6666

在电脑的合适的硬盘中新建文件夹名为mac,在mac中再建立system和disk两个文件夹

正式安装

- 1.安装虚拟机
- 2.服务停止

打开任务管理器: win+R, 输入 services.msc

3.运行unlocker补丁

解压 Unlocker 208 文件,右键选择以管理员身份运行,等待运行完

```
C:\Windows\System32\cmd.exe
                                                                                                                                  П
                                                                                                                                         ×
                        ch8* 0x80 0x1401320e0L 65 61 73 65 64 6F 6E 74 73 74 65 61 6C 28 63 29 41 70

```

4.VMware 创建 Mac 虚拟机

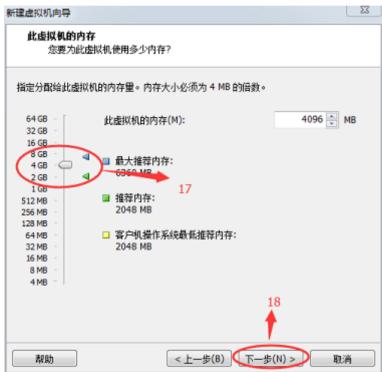

如果没有此选项则是unlocker补丁安装有问题

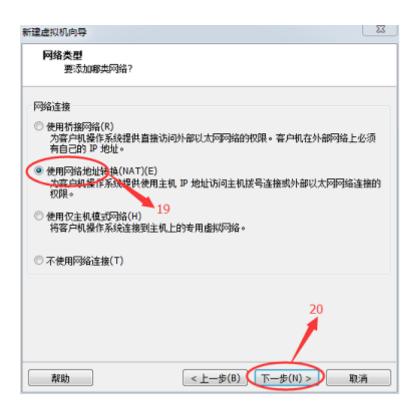

选择mac中的disk目录

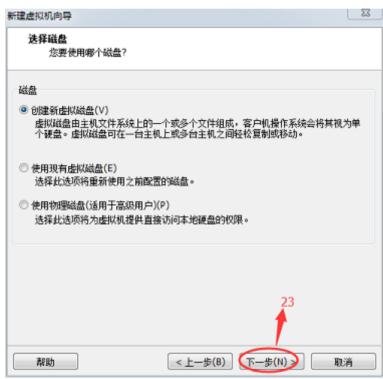

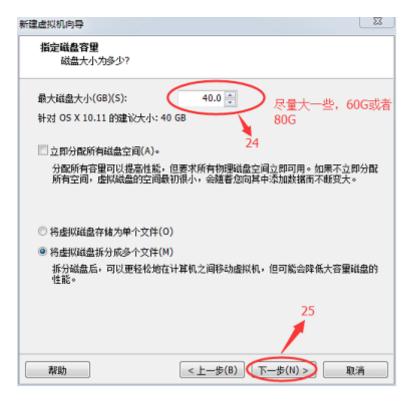

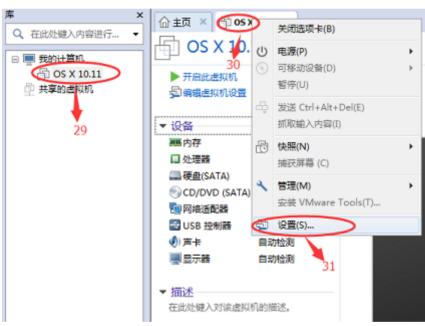

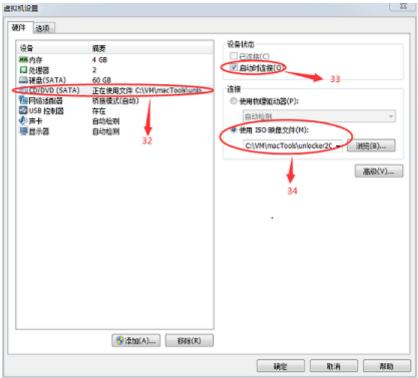

选择之前创建的mac目录下的system文件夹

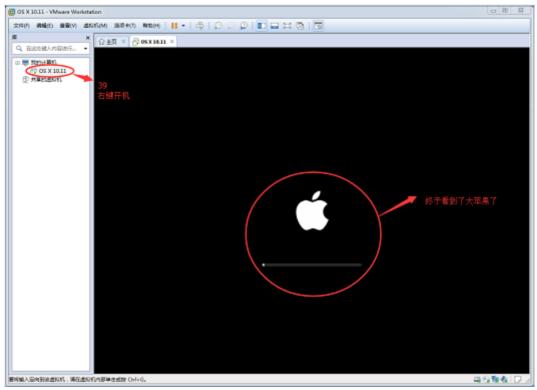

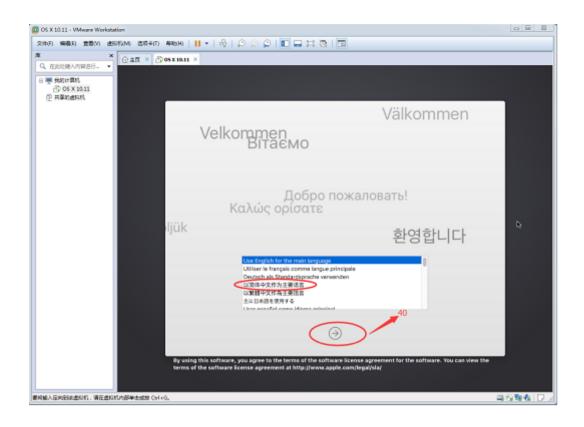

iso镜像文件选择准备的Mac OS X 10.11后缀名为cdr,确定后启动虚拟机会报错

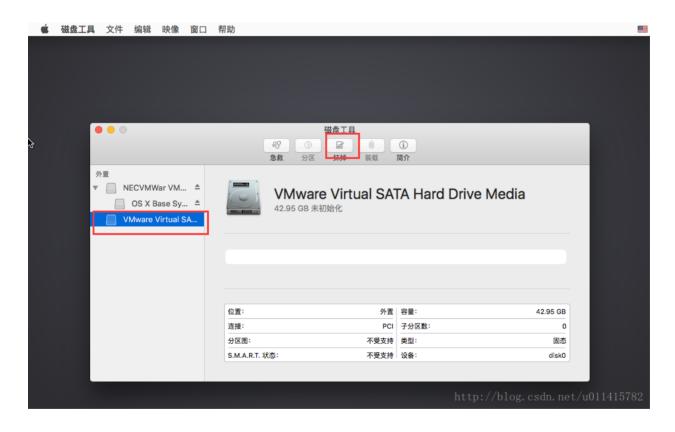

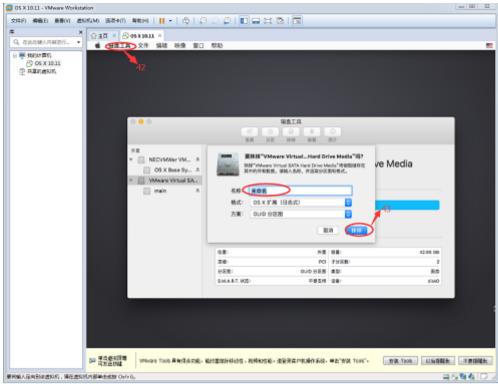

在disk中找到vmx后缀的文件编辑修改后再次启动虚拟机

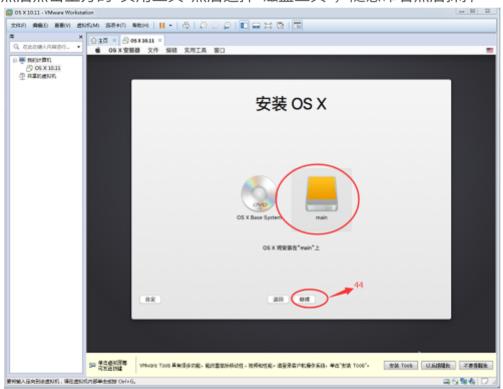

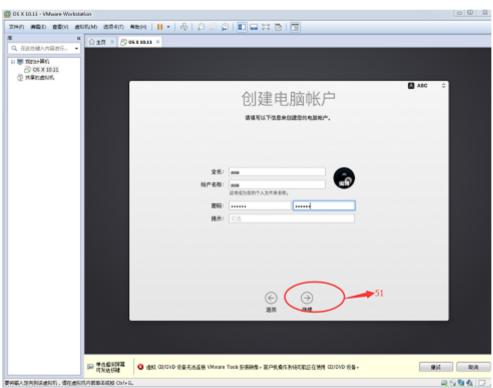

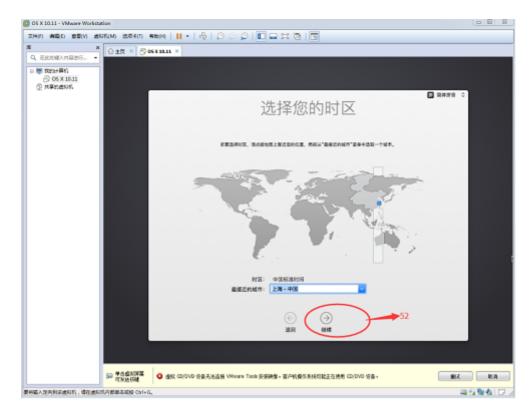

然后点击上方的"实用工具"然后选择"磁盘工具",随意命名然后抹掉

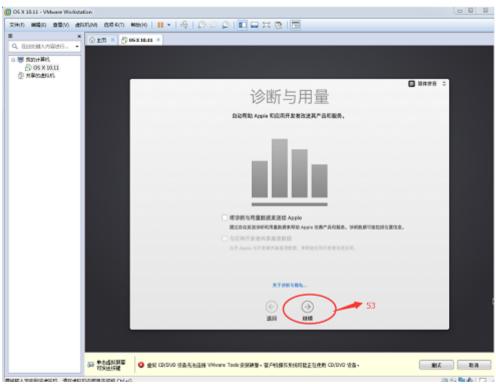

然后一直下一步,到网络界面是需将虚拟机的服务重新开启

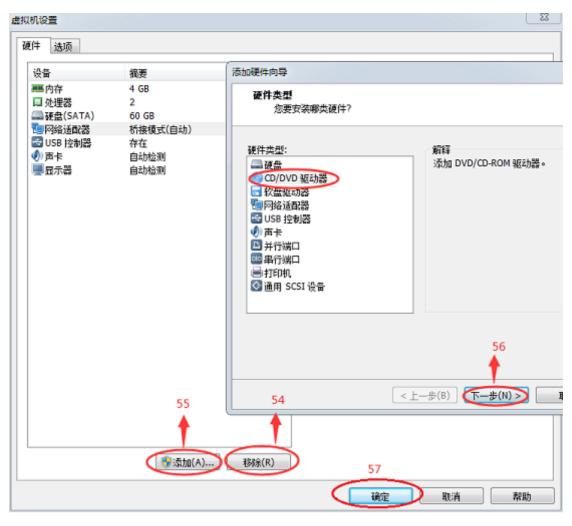

完成到桌面后,再到设置

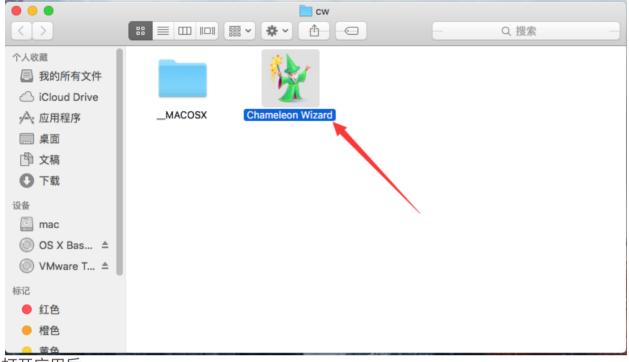

mac桌面会出现VMware Tools,点击安装,按照要求一步一步,然后就可以设置共享文件夹

apple id问题

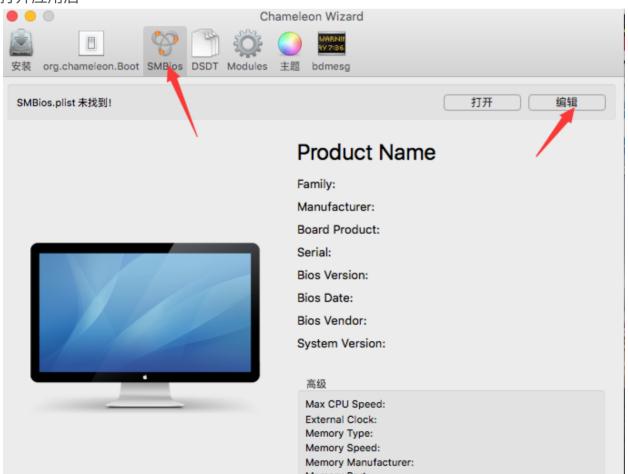

- 1.需要到网页注册,选择地区中国大陆
- 2.需要修改设备信息(假设备)

board-id.reflectHost = "FALSE"下TRUE修改成FALSE再添加 board-id = "Mac-94245B3640C91C81" hw.model.reflectHost = "FALSE" hw.model = "MacBook Pro" serialNumber.reflectHost = "FALSE" serialNumber = "C02JJ8B3DH2G" smbios.reflectHost = "FALSE" 以上只是某一种设备信息,生成设备的方式如下

将cw复制到虚拟机中 • • • cw < >

打开应用后

页制的 SMBioses		
MacBook (5,1) - Core 2 Duo	Product Name:	MacBook5,1
Socket P, Intel Core 2 Duo (P7350/P8600), 100 MHz DDR3 SDRAM, NVidia GeForce 9400M	Family:	MacBook
	Manufacturer:	Apple Inc.
wikipedia.org everymac.com	Board Product:	Mac-F42D89C8

CK91759L1AQ	内存插槽: 1	<u></u>

选择接近自身电脑硬件的设备,然后替换上面设备信息相关内容

3.新注册的账号需要先去ITunes软件登陆,激活相关信息后才能登陆apple store

设置默认root密码

sudo su

输入登陆密码

passwd root 输入root密码
